

Perform Active Directory Tasks Using AD Utility Appstream

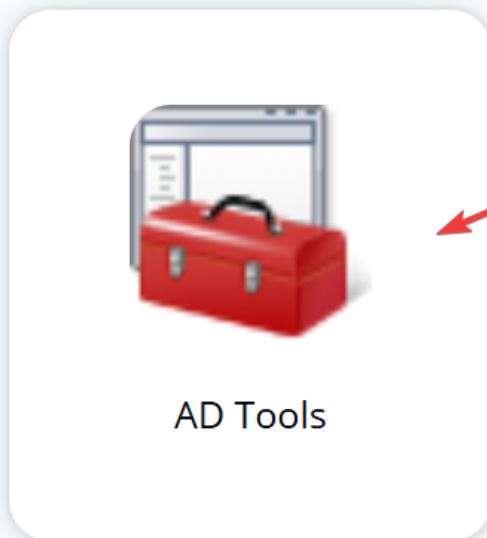

Purpose

The purpose of this procedure is to enable designated ITS staff, distributed IT staff, and other designated people to perform Active Directory tasks via a pre-configured, on-prem domain-joined utility Windows machine. There are many situations where someone may have the responsibility to, for example, add and remove members to AD groups, but they do not themselves have a Windows machine or have the appropriate AD utilities installed.

Directions

1. Go to <https://myapps.microsoft.com>
2. Choose the "ITS AD Utilities AppStream" tile. If you don't see it, but expect to, contact Chi (cshen@uri.ed)
3. Select the "AD Tools" icon

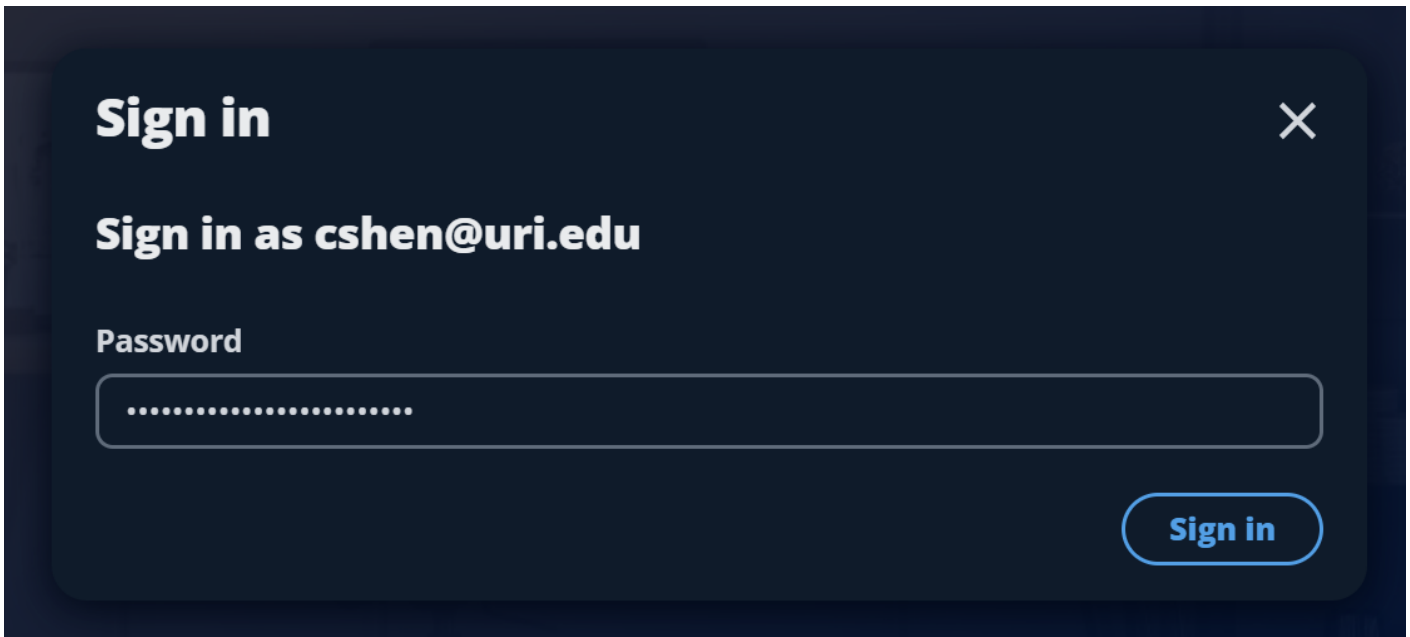

Choose your application to get started

4. Wait for session to start, up to 2 minutes:

Your session is being prepared. The session should be available in less than
01:52

5. Use SSO credentials:

Sign in ✕

Sign in as cshen@uri.edu
