Get VPN

Purpose

Many/most IT resources require the person to either be on the on-campus network (wired or wifi), or on the VPN if off-campus. If you are connecting from off-campus, you will need to first connect to URI's VPN so that we can positively identify who is connecting to the resource in question.

Connect

- **Faculty, staff, instructors, affiliates, etc.** -- all non-student populations are already eligible to self-serve VPN setup and access:
<https://its.uri.edu/services/94530c3f3f00b35e6d294546faa3667f75f63fff22/>
- **Students** are not automatically granted VPN access, but it can be granted by request by their supervising professor, employer, etc., or by ITS staff: https://uriproduct.service-now.com/sp?id=sc_cat_item&sys_id=f25739da970c3910662ff7021153af4e

IT Data Center

URI maintains an IT data center services in Tyler Hall and uses a co-location at the State of RI Department of IT Data Center located in Warwick, RI. Both locations are protected by robust and redundant power and connectivity configurations. These locations house IT equipment and servers. If you have something that you think should be housed in one of the data centers, please book a Zoom meeting.

Resolving "Bad Request" Error Cause

Unknown, but it has something to do with the SSO login. Happens sporadically.

Applies To

- When you are trying to access an SSO-protected website
- When you see "Bad Request", like the following message:

Bad Request

Your browser sent a request that this server could not understand.

Resolution

Any of the three options below should resolve the issue:

- Try browsing to the same page in a different browser (that you hadn't already tried)
- Try browsing to the same page in your main browser, but using a incognito/private window.
- Clearing the cookies/cache from your main browser.
